

Walk For Better Scores and Better Health!

Your doctor tells you that you should be walking several miles at least three times a week, because walking is the best low-impact physical activity that keeps you in reasonably good physical condition. You say, "I haven't got that much time to walk, I have to play golf." Think of it. You tell your spouse, "The doc says I have to play more golf, as long

as I walk the course instead of ride." "Of course, dear. Nothing is more important than your health." And off you go.

Studies have demonstrated that walking the course burns about 50% more calories than riding, lowers blood pressure and cholesterol, gets you in much better shape and here's the most important kicker: IT ACTUALLY LOWERS YOUR HANDICAP! How can that be? By walking, we become more attuned to the course, think more clearly about our next shot, relax and refocus after a poor play, and get a better overall picture of the green as we approach it from the middle of the fairway. We maintain a smooth pace throughout the round, instead of racing from one shot to the next.

But you say, "I don't like to or can't carry my bag or push a cart. I get so tired by the end of the round that my game falls apart".

Modern technology to the rescue! Over the past ten years, electric golf "caddies" have been developed and refined to the point of being like remote controlled toy race cars. Streamlined, looking just like a regular push cart, these "caddies" carry your bag for you all over the course, up hill and down dale (not that there are many of these in Florida). They weigh the same as a regular pushcart and the only addition is the battery. With the advent of more powerful, longer lasting, smaller and 75% lighter lithium batteries, this new genera-

tion of electric caddies makes walking the golf course a walk in the park.

After much research, I recently acquired a Bat-Caddy X4R Remote Controlled Golf Caddy (\$795 with lead-acid battery, \$1195 with lithium battery). My criteria were ease of operation, weight, price, quality of construction, repair history, and how well the manufacturer stood behind its product. With its headquarters in Jacksonville, Florida, Bat-Caddy (www.batcaddy.com) has been building carts for longer than anyone else, accompanied by an outstanding reputation for quick repairs when rarely needed and excellent responsiveness to any buyers' questions or concerns.

Using the Bat-Caddy, I felt like the "Caped Crusader" of the golf course, as my inner child emerged. I not only played golf, but got to drive my remote controlled caddy down the fairway like I was playing with a toy. The most fun was sending the caddy to the next tee while I putted, or calling it over after I found my ball in the rough. I had rediscovered the joy of walking the course! Peter Hanneforth, President of Bat-Caddy, sums it up best. "A Bat-Caddy will help you save your energy for the game, prevent strain and fatigue, fine tune your rhythm of play and feel for the course, improve your health and general fitness, increase fun and companionship, preserve tradition, course conditions and the environment and ultimately improve your handicap."

If only it could putt. 🏌️

Save Your Energy for the Game

Walking the course with a Bat-Caddy does not only increase your energy level and reduce strain on key body parts, it can also contribute to your overall general health and well-being.
